extending the data model INSPIRE Utility Networks from a business point of view

Ing. A.L.M. (Ad) van Houtum MSc
EUROGI 2017 - Paris
Topics

To or not to EXTEND
Utility networks in the Netherlands

Statistics 2016

- ~1.7 million km for water, gas, electricity, telecom, sewerage, fossil fuels and chemicals
- mostly underground
- ~1.100 network administrators
- ~15.000 excavators: building, agricultural and UN
- 32,858 excavation damages on UN
- Average costs €796 per damage
Preventing excavating damage

KLIC
- Information Centre for Cables and Pipelines
- Started in 1968, nation wide since 1986
- Reports of excavations are transferred to network administrators
- Since 2008
  - A legal obligation (WION-act) for network administrators and excavators
  - A service of Kadaster
- Since 2010:
  - Webservice
  - Fully automated transfer to network administrators
  - Fully automated delivery of combined maps (PNG) to the excavator
  - Rate based (2017: €19 per request)
Future business requirements (< 2020)

Good results, but …. the industry demands:

1. A further decline of damages due to excavations
2. Improvement on efficiency
3. Use of network information in other domains, e.g.
   - Planning and zoning
   - Public order and security
User needs (< 2020)

- Ubiquitous service: 24x7, near real-time, any place, any device
- Multiple layered maps: cables / pipelines, (planned) topography, type of soil, cadastral boundaries, addresses etc.
- Sharp images while zooming in
- An administration of reported excavations and provided information
- Authenticated applicants, made known to the network administrators
- Authorization, based on the applicants profile
- Rate per application
- Webservices (WMS, WFS)
- And … meet the requirements of INSPIRE UN
# KLIC vs INSPIRE

Consequences

1. INSPIRE UN must be a part of KLIC
   ▪ Many similarities
   ▪ Less costs for the utility administrators
   ▪ Prevent cannibalization on KLIC

   → INSPIRE UN shall be an additional product of KLIC

2. Common information model for multiple applications
   ▪ Many similarities
   ▪ Less costs in building the information system
   ▪ INSPIRE is leading

   → information model KLIC shall be an extend on INSPIRE UN
Designing the model

- Designed by Geonovum (with help from the industry and AGIV)
- 4 basic methods:
  - Subtyping
  - By association
  - Application domain extension
  - Mixin multiple inheritance
- Most suitable is the Mixin-method
  - The only method to combine 2 models
  - The Dutch model is still recognizable
  - We are not forced into the INSPIRE-model
  - We maintain flexibility
Inheritance

bird

- duck
- cuckoo
- ostrich
Mixin Multiple Inheritance
KLIC-INSPIRE: application

- Obtain credentials (ID + PW)
- Logon to ‘Mijn Kadaster’ > INSPIRE
- Complete user characteristics, e.g. user project number
- Search the area (2.5 x 2.5 km) at adres or geographically
- Check the application
- Accept the supply conditions
KLIC-INSPIRE: delivery

- Confirmation of order by email
- Delivery message by email
- Link to WMS of WFS
- Visualize in (own) GIS-viewer
KLIC-INSPIRE: delivery (2)
Final remarks

To or not to
Thanks for your attention
